نکات جستجو جهت بهبود نتایج

Booleans

And	Or	Not
Each result contains all search terms.	Each result contains at least one search term.	Results do not contain the specified terms.
The search <i>heart</i> and <i>lung</i> finds items that contain both <i>heart</i> and <i>lung</i> .	The search <i>heart</i> or <i>lung</i> finds items that contain either <i>heart</i> or items that contain <i>lung</i> .	The search <i>heart</i> not <i>lung</i> finds items that contain <i>heart</i> but do not contain <i>lung</i> .

Grouping Terms Together Using Parentheses

Parentheses also may be used to control a search query. Without parentheses, a search is executed from left to right. Words that you enclose in parentheses are searched first. Why is this important? Parentheses allow you to control and define the way the search will be executed. The left phrase in parentheses is searched first; then based upon those results the second phrase in parentheses is searched.

- **Generalized Search:**
gingivitis OR plaque AND care OR hygiene
- **Focused Search:**
(gingivitis OR plaque) AND (care OR hygiene)

In the first example, the search will retrieve everything on gingivitis or plaque care AS WELL AS everything on hygiene whether or not the articles refer to gingivitis or plaque.

In the second example, we have used the parentheses to control our query to only find articles about or care or hygiene that reference gingivitis plaque.
